AB Viruses expressing ligands on their surfaces are used as a detection means
for the related polypeptide which binds the ligand. Multiple copies of
the ligand can be expressed on the viral surface. These viruses may be
used to detect polypeptides, cells, receptors and channel proteins. Thus,
bacteriophage expressing an NMDA receptor ligand were used in detection of
NMDA receptor-expressing cells. Binding was detected by incubation with
anti-phage antibody and fluorescein-labeled secondary antibody followed by
FACS.
